

The Elan Factory – Product Data Sheet

Carbalancer – twin/multiple carburettor air balancer

Twin or multi carburettors can be an expensive luxury, if they are not delivering equally balanced amounts of petrol/air mixture to your cylinders. Carbalancer can determine precisely whether the throttles are in need of balancing.

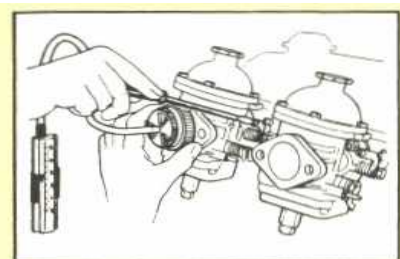

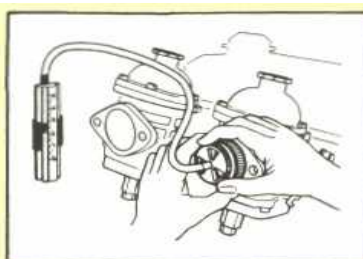

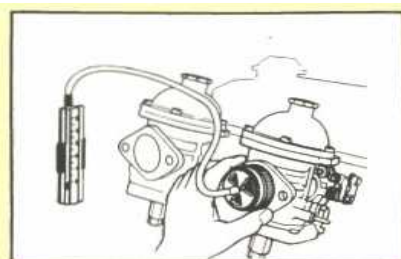

Balanced throttles result in better performance, more miles per gallon and smoother acceleration.

With its unique micro metering-head and easy to read scale, Carbalancer provides an accurate measurement of the air-flow into each carburettor.

The scale can be mounted vertically on any convenient projection near the carburettors with the universally jointed spring clip.

Carbalancer fits most carburettors with air intakes of 1" (25mm) to 2 1/4" (57mm) diameter. However a simple adaptor can easily be fabricated, so it can be used on any round or square intake carburettor.

Carbalancer can also be used most on fuel injection systems to ensure the airflow through each manifold branch is balanced.
