

The Elan Factory - Product Data Sheet

Esprit anti-roll bar to lower link bush (Lotus part number A079C4045F)

The original anti-roll bar to lower control arm bush (Lotus part number A079C4045F) has been obsolete for several years. This situation leaves early Esprit owners with few choices as to what to fit as a suitable replacement. The same rubber bush was fitted as standard equipment on the Lotus Esprit series 1 and series 2.

The Elan Factory now offers a superior quality component as a direct replacement for the original rubber bush. By manufacturing this component in urethane, this offers the following improvements to your Esprit suspension.

- Less change in suspension geometry whilst cornering under heavy loads
- Enhanced road holding and steering performance
- Outstanding abrasion resistance which results in longer suspension life and less repair time

The new bushes are a split construction which simplifies installation and no modifications are required. The anti-roll bar bushes should be replaced per the procedure described in the Lotus workshop manual – see pages C4 and C5.

- Bush material - Urethane
- Bush construction – two piece
- Crush tube – steel solid billet
- Crush tube protective finish – Zinc plated, then passivated

These bushes are supplied in a kit which contains everything you need. The kit contents are as follows: four urethane bushes, two crush tubes and two large thick washers. Whilst replacing the bushes in the lower control arms, why not upgrade the anti-roll bar to chassis mounting bushes (Lotus part number A075C6005F) as we can also supply these in urethane.

For further information regarding urethane bushes, performance products or genuine Lotus products, please phone The Elan Factory on (613) 9761-1903 or fax on (613) 9739-8944. Alternatively you can write to The Elan Factory at 5 Marong Court, Boronia Heights 3155, Melbourne, Australia or e-mail at sales@elanfactory.com.au
